

Weekly Investment Committee — Deal Review

Monday cadence · Associate + Partner · the operating rhythm of the origination machine

WHEN Mondays, 60 min	ATTENDEES Partner (chair) · Associate (presents)	PRE-READ (FRI EOD) IC memos for top 5 · pass list · pipeline snapshot	INPUTS Deal Pipeline board · IC memo PDFs · follow-up queue · Sources	OUTPUT Minuted decisions + owned actions
-------------------------	---	--	--	---

AGENDA

TIME	ITEM	WHAT HAPPENS
0–3	Open Minutes from last week	Conflicts of interest declared. Last week's actions reviewed FIRST — every carry-over named with its owner. No new business until old business is closed or re-dated.
3–13	Pass review — two channels Not a Fit list + reasons	Secondary (intermediary-introduced) and primary (tool-sourced) passes since last Monday, reviewed separately. For each: is the stored pass reason right? Any false negatives to resurrect? Pattern lessons feed back into filters and criteria — the pass pile is where the tool learns.
13–38	Hot companies — top 5, one by one IC memo one-pagers	Five minutes each, memo-led: mandate fit (band, thesis, 25%+ feasibility from the cap table) · financials & deal math · engagement status + action bucket · risks & open questions. Every company leaves with a decision: Advance Hold + date Pass + reason and a named owner for the next action.
38–43	Pipeline hygiene Follow-up queue + stale flags	Red queue (we owe replies) cleared or assigned · amber queue (14d+ silent) follow-ups approved · stale >10d cards challenged · week's stage moves and conversion counts in one line each.
43–48	Market & portfolio watch Watch alerts + news hooks	Sector themes and notable transactions/comps touching the thesis · registry watch alerts (capital events, new accounts, red flags) · brief portfolio company pulse (Journey, Glowday) where relevant to origination credibility.
48–56	Tool & sourcing review Sources overlay + LP module	Enhancements shipped this week and their effect · data-quality issues found · sourcing coverage: new AI sources added, Friday refresh results, universe growth · LP mining and connection-layer highlights (warm-intro paths discovered) · next build priorities agreed.
56–60	Next steps Action log	Actions read back: owner + deadline on every line. Decisions minuted with one-line rationale (the decision log is the fund's memory). Agree next Monday's likely top 5.

DECISION FRAMEWORK (PER HOT COMPANY)

Advance

 next stage + named action within 7 days (call booked, memo to full IC, DD kickoff).

Hold

 only with a dated trigger (follow-up date, filing due, founder timing) — never an open-ended park.

Pass

 reason recorded on the company (unfit_reason) so the same name never wastes a second meeting.

STANDING RULES

Memo-led, not memory-led: no hot company discussed without its one-pager.

Numbers from the verified record only; estimates always labelled as estimates.

Silence is a decision: anything not advanced is explicitly held or passed.

15 minutes hard cap overrun; anything unfinished tops next week's agenda.

Friday pre-work (Associate): generate/refresh IC memos for the proposed top 5 · compile the two pass lists with reasons · clear or annotate the red follow-up queue · circulate pack by EOD Friday. The Monday meeting spends its hour deciding, not discovering.
