

What the tool can do now

A visual walkthrough of the features shipped 15–22 July 2026 · Deal Origination Platform

- 1 Contact Waterfall — finding the founder's real email
- 2 Companies House Intelligence — filings, cap tables, distress flags, multi-year history
- 3 Inven Upload Pipeline — 3,000+ companies with financials in one drop
- 4 Full-Screen Company Profile — everything about a company in one place
- 5 SmartEnrich — the cheap refresh layer
- 6 Action Buckets — intelligence on every founder reply
- 7 Deep Email Sync — the complete conversation history
- 8 Bulk SmartFill — batch architecture that tells the truth
- 9 IC Memo Generator — a committee-ready one-pager per deal
- 10 Data Integrity Guardrails — good data is never overwritten

Contact Waterfall

Cold outreach lives or dies on reaching the actual founder. The waterfall tries four escalating tactics and never stores a guess it cannot stand behind.

HOW IT WORKS

WHAT YOU SEE

jane@saascada.com · found on site

j.smith@acme.io · verified pattern

(blank) · nothing verifiable found

The email source is stored alongside the address, and the whole waterfall was retro-applied to every previously enriched company.

Where: runs automatically inside every SmartFill and SmartEnrich; the result appears in the company profile's People tab and pre-fills the outreach draft recipient.

Companies House Intelligence

The registry holds more than accounts. The tool now extracts distress signals, ownership proof, cap tables and a full multi-year financial history — from the actual filed documents.

MULTI-YEAR HISTORY (PARSED FROM FILINGS)

Up to 6 filed periods: revenue, gross profit, profit, assets, cash, employees — feeding the profile's charts and P&L table.

CAP TABLE FROM THE CS01 FILING

HOLDER	%
J. Dean (founder)	72.4%
A. Patel	15.1%
Seed angels (4)	9.5%
Others	3.0%

Percentages computed in code on one share basis — always sums to 100. Answers the key question: can we buy 25%+?

DISTRESS & FILING SIGNALS

Accounts OVERDUE

Insolvency history

2 registered charges (debt)

Regime upgraded: micro → small (growth signal)

Last resolution: share allotment

DAILY WATCH

A scheduled job (07:00 UTC) sweeps the 80 stalest companies each day and refreshes their registry intel — the whole universe rotates through automatically.

Where: Financials, Ownership and Companies House tabs of every company profile; flags surface on the memo and in risk sections.

Inven Upload Pipeline

Drop an Inven export on the upload button and 3,000+ companies land in the universe with their financials intact — no AI cost at ingest.

HOW IT WORKS

NEW FIELDS CAPTURED PER COMPANY

Revenue CAGR 3yr

Employee growth 1yr

Employee growth 3yr

EBITDA margin

Directors

Company LinkedIn

Hard-filter failures (wrong geography, industry, size) are auto-rejected at upload with a stored reason — zero AI calls. Everything else waits for SmartFill scoring before it can enter the pipeline.

Where: Sources → upload on the Master Universe page. The result message reports how many were triaged instantly.

Full-Screen Company Profile

Click any company name and a full-screen profile opens — modelled on Inven's layout, but wired to our own data and actions.

THE LAYOUT

Plastometrex B2B · Cambridge · Responded

← prev · next → · Esc closes

Summary | Financials | Ownership | People | Companies House | Outreach | IC Memo

Revenue chart (filed, multi-year) · headcount chart · multi-year P&L with gross-margin row · description & keywords

Fit score & band · contact card · activity feed · email thread · action buttons (SmartFill / Enrich / Outreach / Advance)

WHY IT MATTERS

Arrow keys move through your filtered list, so reviewing 30 qualified companies is a five-minute keyboard exercise rather than 30 clicks. Every action available on the kanban is available here, backed by the same shared logic.

Where: click any company name in the Universe table or on a Pipeline card.

SmartEnrich — the Cheap Refresh

SmartFill is the expensive first pass. SmartEnrich is the light-touch update for companies already in play — a quarter of the cost, run as often as you like.

WHAT ONE RUN DOES

FLEET OPERATIONS

A batched sweep endpoint enriches every company from Qualified through Won in small server-side chunks — used for the one-off passes ("refresh all 77 engaged companies") without babysitting.

Every run writes a timestamped "SmartEnrich: contact verified · accounts parsed · draft refreshed" summary to the activity feed, so you can see exactly what changed and when.

Where: the Enrich button on any company profile or Universe row; sweeps run via the ops endpoint.

Action Buckets

When a founder replies, the tool reads the email AGAINST our own record — fit score, revenue band, mandate — and files it into one of ten action buckets, with a one-sentence rationale and a drafted response where one is warranted.

ON THE RESPONDED CARD

Plastometrex

B2B · CAMBRIDGE

TARGET BAND

Fit 78

Revenue ~£4.7M · Team 30

Right fit — set up call

The bucket replaces "Email Sent" as the button — clicking opens the Outreach tab with the suggested reply ready to copy.

THE TEN BUCKETS

Right fit — set up call

Right fit — answer & advance

Redirect — follow the referral

Right fit — structure mismatch

Right fit — too early, nurture

Not now — timing

Right fit — too large, stay close

Needs human read

Declined — close politely

Not the right fit — do not respond

Green = act now · blue = respond · amber = parked with a follow-up date · red = no pursuit · grey = your judgement. The Responded column auto-sorts act-now to the top.

THE RULES

✓ Founder-stated numbers beat our record

✓ Buckets never move stages — they recommend, you decide

✓ Suggested replies are review-and-send only, and disappear automatically once you have answered

Where: chips and buttons on Responded kanban cards; full panel with rationale, follow-up date and suggested reply in the profile's Outreach tab.

Deep Email Sync

The email log is the single source of truth for every founder conversation — and it now holds the complete history, not a rolling window.

BEFORE VS NOW

	REGULAR SYNC	DEEP SYNC
Window	Last 30 days	Full history (10 years)
Method	Scan newest mailbox messages	One targeted search per known contact
Coverage	Could miss old threads in a busy inbox	Every exchange with every corresponded contact

WHAT EVERY SYNC RUN DOES

✉ Logs new messages (matched by contact, drafted recipient, or company domain) · classifies replies · assigns action buckets · stamps reply times with the email's *actual* date · advances Engaged → Responded on any reply · clears consumed reply suggestions · self-heals anything a previous run missed.

The completion message reports every count — including failures, loudly, with reasons.

Where: the Sync Emails button (Universe + Pipeline headers). Threads appear in each company profile's Outreach tab.

Bulk SmartFill — Batch Architecture

Enriching a hundred companies used to mean a hundred fragile browser requests. Now the browser asks the server to work through the list in batches — and the numbers it reports are the truth.

HOW IT WORKS

BUILT-IN PROTECTIONS

Idempotency guard	A company processed in the last 10 minutes is never re-run — a dropped response re-sent by the browser costs nothing.
Daily caps	450 runs/day + a weighted grounding budget; hitting the cap stops the batch cleanly and preserves the remainder for tomorrow.
Visible failures	Real failures appear in a red box in the modal, each with its company and reason. No more silent mysteries.
100 per run	Batch size raised from 25 — a full Inven tranche enriches in one sitting.

Where: the Bulk SmartFill button on the Master Universe page — the funnel shows exactly what is eligible and the estimated AI cost before you start.

IC Memo Generator

One click on an Engaged company produces a committee-ready one-pager. Every number is assembled in code from the verified record with its source labelled; the AI writes only the narrative around it. Gaps say "Not yet known" — the memo never invents.

THE ONE-PAGER

TechCo Ltd · IC Memo · 22 Jul 2026

THE OPPORTUNITY — what they do, sourced proprietarily, why now
MANDATE FIT — revenue envelope **PASS** · thesis **PASS** · 25%+ stake **UNKNOWN**
FINANCIALS — source-tagged table (CH filed / Inven / estimate)
DEAL HYPOTHESIS — £36–54M at 4–6x · cheque buys ~33–89%
OWNERSHIP — founder 72% per CS01
ENGAGEMENT — from the actual email thread
MARKET CONTEXT — one grounded search, sources named
RISKS & OPEN QUESTIONS — registry flags injected automatically
RECOMMENDATION — one sentence

HOW IT FLOWS

1. Press **Generate IC Memo** on any Engaged-or-later kanban card (or in the profile's IC Memo tab).
2. ~20 seconds later the profile opens on the finished memo: mandate checks coloured PASS / FAIL / UNKNOWN, financial table, computed valuation math, cap table, risks.
3. **Download PDF** produces the A4 one-pager for the IC pack. Regenerate any time — it re-reads the latest record.

Cost: one grounded search per memo — the same budget weight as a news lookup.

Where: "Generate IC Memo" button on Engaged+ pipeline cards; IC Memo tab in every company profile.

Data Integrity Guardrails

The database is the single source of truth — so the rules about what may overwrite what are now enforced in code, everywhere data is written.

THE PRECEDENCE RULES

DATA	RULE
Financial figures	A value from Companies House filings wins (most verifiable). A failed or empty parse never wipes stored figures from Inven or PitchBook.
Contacts & website	A non-blank finding wins; a blank finding keeps what we had.
Registry fields	Written only when Companies House actually matched this run — a failed lookup wipes nothing.
Description	Longer wins. Rich text is never replaced by a thinner summary.
Uploads	Existing companies merge — new data fills gaps, never overwrites.
Timestamps	Events carry the time they <i>happened</i> (the email's date header), not the time we processed them.

PIPELINE HYGIENE

Nothing enters the Qualified kanban unscored. Upload triage is reject-only: hard-filter failures go straight to Not a Fit with a stored reason (zero AI cost), while passers wait for SmartFill to compute their fit score before they can appear on the board.

Where: invisible by design — these rules run inside every SmartFill, SmartEnrich, upload and sync. The activity feed records what changed; the data you trusted yesterday is still there today.
